FULLERTON SCHOOL DISTRICT RELEASES REPORT ON RESPONSIBLE USE OF WIRELESS TECHNOLOGY IN THE CLASSROOM

Robert Pletka, Ed.D.
Superintendent, Fullerton School District

(Fullerton, CA) –

The Fullerton School District today released the results of a study that was conducted to provide a screening of electromagnetic fields (EMFs) including radio frequency (RF). The report comes from Daniel H. Ginsborg, MSIH, CIH, CSP, Chief Executive Officer of Executive Environmental Services Corporation (EESC). The study focused on potential EMF related to wireless access point technology (commonly referred to as “WiFi”) installed at Acacia Elementary School.

The report concluded that all EMF (RF) measurements were **significantly below** the Federal Communication Commission (FCC) exposure limits. Further, the report concluded that all EMF (RF) measures were more than 10,000 times lower than the FCC standards (a measurement used by the Los Angeles Unified School District as their District Precautionary Threshold Level.)

“Fullerton School District is proud to offer a 21st century learning environment to our students which includes extensive use of hand held devices for our students and teachers,” noted Dr. Bob Pletka, District Superintendent. “At the same time, the safety of our students has been and will always be our first priority. We’re happy to be able to verify through the most up-to-date expert professional testing that our wireless classrooms not only offer tremendous teaching and learning opportunities, but are also totally safe for our kids.”

More information about the District’s technology programs for students, as well as the RF testing and a copy of the report, can be found on the District’s website: <http://fsd.k12.ca.us/index.html>

EESC provides industrial hygiene and environmental consulting services to school districts, municipalities, and private firms across southern California. More information about the firm can be found at <http://executiveenvironmental.com> .
